MOBILE SOLUTIONS FOR MICROSOFT DYNAMICS

Functional Highlights

- Full Dynamics NAV Integration
 - No middleware required. Since Dynamics Anywhere Framework applications are developed completely within the Dynamics NAV development environment, there's no need for middleware. This means less hassle with support and less hassle when modifications are required.
 - Developers familiar with Dynamics NAV development can develop and maintain Dynamics Anywhere Framework applications. No need to build up experience with a new development platform.
 - Developed within Dynamics NAV means there's no need to open up business logic to external processes or applications. This reduces security risks, and also makes support and maintenance of Dynamics Anywhere applications that much easier.
- Dynamics Anywhere Portal provides a simple and reliable interface to mobile devices.
 - Works on any mobile device with a browser. There's no need to support multiple clients for multiple device types and versions.
 - Support usage of multiple device types and form factors simultaneously. Within the same application, presentation can be configured to look and work well on every device in use.
 - Works with limited browser implementations commonly found on mobile devices. Where ordinary HTML based solutions work poorly or not at all on mobile devices, the Dynamics Anywhere Portal is designed to overcome these problems.
 - Makes the most of additional resources like barcode scanners or RF tag readers. Smart usage of these additional resources greatly improves user productivity, while at the same time improving ease of use and greatly reducing errors.

MOBILE SOLUTIONS FOR MICROSOFT DYNAMICS

Benefits

- Ease of Development
 - Develop within Dynamics NAV development environment. No need for additional development environments, no middleware required, and no need to worry about a mobile device client.
- Ease of Support
 - No middleware to support and maintain.
 - No need to train for support and maintenance of additional platforms and applications, it's all Dynamics NAV.
 - No need to support multiple clients for multiple device types and versions.
- Ease of Use
 - Use any mobile device with a browser.
 - Use multiple device types and versions simultaneously.
 - Make the most of additional mobile resources like scanners and RF tag readers.
